Web Developer

Objective: to transfer a highly diverse skillset of project coordination and prioritizing high-stakes deployments to the field of software development. I bring a fast-paced of working, in-depth technical knowledge, and an understanding of what is working right now within the industry from both web development and an operational perspective.

TECHNICAL SKILLS

Ruby, Ruby on Rails, JavaScript, React, Redux, TypeScript, Express, Go, Docker, Tailwind CSS, Docker, Heroku, Netlify, Firebase, HTML/CSS, Command-Line, SQL / Postgres, Git / Github, Pair Programming, Object-Oriented Design

TECHNICAL PROJECTS

Duly-Noted - [Github](#) | [Demo](#)

A full stack single page application using React(TypeScript) on the front-end, Go as the API back-end, and Tailwind CSS for quick and responsive stylings

Platform in which users can take down notes by speaking with a series of voice commands they may also utilize

- Configured back-end using Gin & GORM frameworks to create HTTP endpoints and to integrate Object-relational mapping to execute database queries
- Incorporated Web Speech API to handle speech recognition and display that speech into text
- Utilized JSON Web Tokens authenticate users and securely store encrypted user information within local storage

BottleRocket - [Github](#) | [Demo](#)

A full stack application built on React on the front-end, Ruby on Rails as the back-end

Single page application for connecting customers with local wine merchants to deliver high-quality wines

- Incorporated Twilio API for SMS marketing notifying subscribers of current offers daily
- Utilized delayed jobs to execute tasks as a background process
- User-friendly administrative features to manage products and offers

Crown Brand Clothing - [Github](#) | [Demo](#)

Front-end web application built using React as the front-end, and Firebase for database and authentication system

A sleek, easy to use single page e-commerce platform where users can purchase apparel

- Integrated Firebase to handle database to add users, and to handle user authentication with AuthO allowing users to sign-in with Google
- Utilized Stripe API as the payment option to securely handle customer checkout experience and validate customers payments

EXPERIENCE

CanGwenCook - <https://cangwencook.com/>

Freelance Web Developer

San Francisco, CA

08/2020 - Present

- A web application where the client can share their recipes as well as promote content on their YouTube channel and have a platform in which they can sell their branded merchandise
- Built and maintain a full stack web application for the client using Ruby on Rails as the API back-end, React on the front-end, and PostgreSQL database
- Integrated ActiveCampaign API to handle newsletter subscriptions for email marketing

JetBlue Airways

Airport Operations Coordinator

San Francisco, CA

01/2016 - 01/2020

- Contribute to daily briefings addressing issues that need to be brought forward regarding the operation
- Coach fellow crewmembers regarding best practices to ensure consistency throughout the operation
- Coordinate daily operations with airport managers, ground operations supervisors, IT engineers, and special needs business partners to ensure the delivery of top-notch customer service and efficiency

EDUCATION

Flatiron School

Full Stack Web Development, Ruby on Rails and JavaScript program

San Francisco, CA
